

Flexible. Compact. Robust.

PGF Universal Gripper

Universal parallel gripper with surface-guided base jaw

Field of Application

Suitable for clean working environments and high part diversity due to its long jaw stroke and high gripping forces

Advantages – Your benefit

Precise flat guidance for very good guidance characteristics

Large stroke at compact design for minimal interfering contours

Mounting from two sides in three screw directions for universal and flexible gripper assembly

Air supply via hose-free direct connection or screw connections for flexible pressure supply in all automated systems

M5 connection on both sides of the guidances for the use of lubricating nipples

Functional Description

The round piston is pushed upwards or downwards with compressed air.

The angled active surfaces of the wedge-hook produce a synchronized, parallel jaw motion.

- ① **Sliding guide**
Precise gripping through flat, low-play precision ground guidance along the entire length of the housing
- ② **Base jaw**
for the connection of workpiece-specific gripper fingers
- ③ **Housing**
Weight-optimized through application of high-strength aluminum alloy
- ④ **Wedge-hook design**
for high power transmission and centric gripping
- ⑤ **Centering and mounting possibilities**
for universal assembly of the gripper

CAD data, operating manuals and other current product documents are available at www.schunk.com

General Notes about the Series

Operating principle: Wedge-hook kinematics

Housing material: Aluminum alloy, anodized

Base jaw material: Steel

Actuation: pneumatic, with filtered compressed air as per DIN ISO 8573-1: 7 4 4

Warranty: 24 months (details, general terms and conditions and operating manuals can be downloaded at www.schunk.com)

Scope of delivery: Mount for proximity switch, centering sleeves, O-rings for direct connection, assembly and operating manual with declaration of incorporation.

Gripping force maintenance device: possible with SDV-P pressure maintenance valve

Gripping force: is the arithmetic total of the gripping force applied to each gripper jaw at distance P (see illustration).

Finger length: is measured from the upper edge of the gripper housing in the direction of the main axis. The breach of the max. permitted finger length can bring higher abrasion. The maximum permissible finger length applies up to the nominal operating pressure. With higher pressures, the finger length must be reduced proportionally to the nominal operating pressure.

Repeat accuracy: is defined as the spread of the limit position after 100 consecutive strokes.

Workpiece weight: is calculated for a force-fit connection with a coefficient of friction of 0.1 and a safety factor of 2 against slippage of the workpiece on acceleration due to gravity g. Considerably heavier workpiece weights are permitted with form-fit gripping.

Closing and opening times: are purely the times that the base jaws or fingers are in motion. Valve switching times, hose filling times or PLC reaction times are not included in the above times and must be taken into consideration when determining cycle times.

Application example

Assembly unit for mounting a pin in a bore with tolerances for the position. The compensation unit compensates for the planar offset without turning or tilting the workpiece.

- ① PGF 2-Finger Parallel Gripper with top finger and workpiece
- ② AGE-XY Compensation Unit

SCHUNK offers more ...

The following components make the product PGF even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Centering Sleeves

Fittings

Inductive Proximity Switches

Sensor Cables

Flexible Position Sensor

Gripper Pads

Sensor Distributor

Plastic Inserts

SDV-P Pressure Maintenance Valve

Options and special Information

Gripping force maintenance version AS / IS: The mechanical gripping force maintenance version ensures a minimum gripping force also in the case of a drop in pressure. In the AS / S version this has the effect of a closing force, in the IS version of an opening force.

Due to the long guidance, the gripper is highly resistant during gripping operations where the gripper fingers are exposed to high moment loads. Grippers with a higher exchange accuracy are available on request.

PGF 125

SCHUNK Grippers pneumatic | 2-Finger Parallel Grippers | Universal Gripper

Gripping force, O.D. gripping

Gripping force, I.D. gripping

Finger load

① The indicated moments and forces are static values, apply per base jaw and may occur simultaneously. M_y may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is impreative to throttle the air supply so that the jaw movement occurs without any hitting or bouncing. Service life may be reduced.

Technical data

Description		PGF 125	PGF 125-AS	PGF 125-IS
ID		0340390	0340391	0340392

Main view

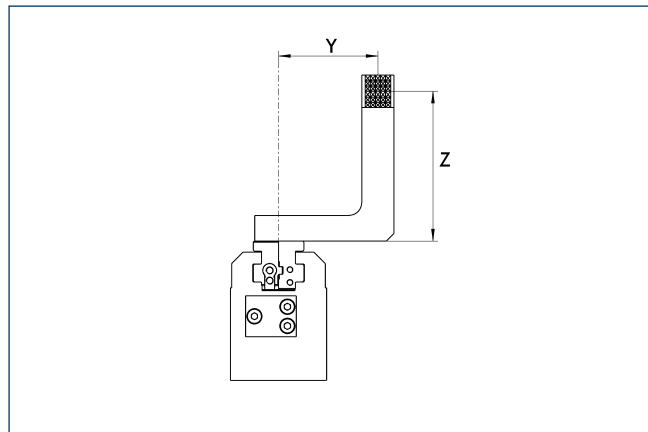

The drawing shows the gripper in the basic version with closed jaws, without dimensional consideration of the options described below.

① The SDV-P pressure maintenance valve can also be used for I.D. or O.D. gripping alternatively or in addition to the spring-loaded, mechanical gripping force maintenance device (see catalog section on "Accessories").

- A, a Main / direct connection, gripper opening
- B, b Main / direct connection, gripper closing
- ① Gripper connection
- ② Finger connection
- ⑥ Lubricating nipple connection
- ⑦② Fit for centering sleeves
- ⑧⑩ Depth of the centering sleeve hole in the mating part
- ⑨⑩ IN ... sensor

Maximum permitted finger projection

■ Permitted range ■ Inadmissible range

L_{max} is equivalent to the maximum permitted finger length, see the chart of technical specifications.

Hose-free direct connection M5

③ Adapter

④ Gripper

The direct connection is used for supplying compressed air without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

SDV-P pressure maintenance valve

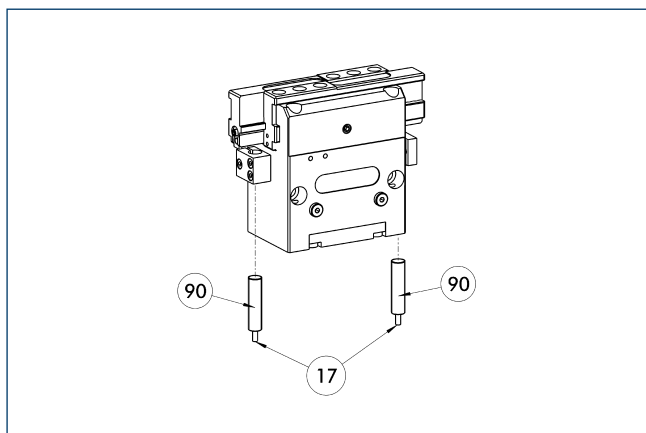

④ Gripper

⑨⑩ SDV-P pressure maintenance valve

The SDV-P pressure maintenance valves ensure that the pressure in the piston chamber of pneumatic gripping, rotary, linear, and quick-change modules is maintained temporarily during an emergency stop.
