SCHUNK Lean Automation Kit

Up to 30% Reduction in Setup Time and Cost

The SCHUNK Lean Automation Kits enable easy, quick, and cost-effective machine tool automation.

SCHUNK modules with shaft interface use the functional conditions of the machine. They are clamped in a standard \varnothing 20 mm toolholder and can therefore be quickly exchanged directly out of the tool rack, and is moved by the machine. The travel paths of the spindle can be used in this way, but also the supply of compressed air and coolant as well as the tool rack of the machine tool.

This simple and cost-effective automation of the machine tool reduces machine downtime to a minimum and thus cuts costs.

Your advantages from a single source:

- Low-cost solution for fully automated workpiece exchange
- Increase your level of automation
- Tools can be interchanged universally in different tool spindles as well as machines
